## USER'S MANUAL

## 5 MHz FUNCTION GENERATOR <br> FG-52

## FG-53 is using FG-52 USER MANUAL

1. FG-53 operation is similar to FG-52. Thus, FG-53 uses FG-52 manual temperately.
2. The only difference of FG-53 is changing FG-52 DC OFFSET OUTPUT to very useful voltage amplify function.
3. When FG-53 is using as a voltage amplifier, the input signal less than $+/-5 \mathrm{Vp}-\mathrm{p}(\leqq+/-5 \mathrm{Vp}-\mathrm{p}$ ), Max output is able to $+/-20 \mathrm{Vp}-\mathrm{p}$. Bandwidth: DC ~5MHz, Max Current: 40mA.
4. FG-53 is able to use AMPLE knob to adjust Gain to 10 times. It also can use DC offset knob to adjust DC bias voltage. FG-53 is a very useful model for amplifying small signals experiments.

## I. NOTICE BEFORE OPERATION

1. Unpack the instrument :

After receipt of the instrument, immediately unpack and inspect it for any damage which might have been sustained when in transportation or shortage of accessories. If any sign of damage and shortage of accessories are found, immediately notify the dealer.

## 2. Environments :

Normally, operational temperature of the instrument is $10^{\circ} \mathrm{C}$ to $40^{\circ} \mathrm{C}\left(50^{\circ} \mathrm{F}\right.$ to $\left.104^{\circ} \mathrm{F}\right)$. Operation of the instrument outside of this temperature range may cause damage to the circuits. Do not use the instrument in a place where strong magnetic or electrical field exists. Such fields may disturb the measurement.
3. Check the Line Voltage :

The instrument can operate on any one of the line voltages shown in the below table by inserting the line voltage selector plug in the corresponding position on the rear panel. Before connection the power plug to an AC line outlet, be sure to check that voltage selector plug is set in the correct position corresponding to the line voltage.

CAUTION : The instrument may not properly operate or may be damage if it is connected to a wrong voltage AC line. When line voltages are changed, replace fuses also a required.

| SELECTOR | LINE VOLTAGE | FUSE |
| :---: | :---: | :---: |
| 115 V | $100 \sim 125 \mathrm{~V} 50 / 60 \mathrm{~Hz}$ | 600 mA |
| 230 V | $220 \sim 240 \mathrm{~V} 50 / 60 \mathrm{~Hz}$ | 300 mA |

Hints for operation the instrument observe the following suggestions for successful instrument operation.

1. Never place heavy objects on the instrument.
2. Never place a hot soldering iron on or near the instrument.
3. Never insert wires, pins or other metal objects into ventilation fan.
4. Never move or pull the instrument with power cord or probe cord. Especially never move instrument when power cord or signal probe is connected to a circuit.
5. If the instrument is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

WARNING : The following precautions must be observed to help prevent electric shock.

1. When the instrument is used to make testing. There is always a certain amount of danger from electrical shock. The person using the instrument in such condition should be a qualified electronics technician or otherwise trained and qualified to work in such circumstance.
2. Do not operate the instrument with the cover removed unless you are a qualified service technician.
3. The ground wire of the 3 -wire Ac power plug places the chassis and housing of the instrument at earth ground. Use only a 3 -wire outlet, and do not attempt to defeat the ground wire connection or float the instrument. to do so may pose a great safety hazard.
4. Do not obstruct the ventilation holes in the rear panel. As this will increase the internal temperature.
5. Never apply external voltage to output BNC of the instrument.
6. Excessive voltage applied to the input BNC may damage the instrument.

## II. FG-52 GENERAL

## DESCRIPTION :

The FG-52 is a super deluxe function Generator combined a 5 digits, high resolution 60 MHz counter.
The FG-52 is a rugged, easy to operate, excellent heat dissipation and high stability instrument.
The FG-52 is 4 in 1 instrument. It can be used as the following describes 4 kinds of electronic instrument respectively.

## 1. To be as Function Generator:

8 wave forms selected by rotary switch instead of push-button to prevent mis-touch or bad connection. Max. output 20Vp-p (Non-load), and Mini. output 0.1Vp-p (Non load).
2. To be as Pulse Generator:

FG-52 provide positive pulse and reverse negative pulse output by Pull Reverse Switch, Max. output 20Vp-p (Non-load).
Frequency display by LED, pulse width from 0.4 sec to 100 ns .Can meet most of Audio, Video and other Basic electronic application requirement.
3. To be as Sweep Generator :

FG-52 provide linear sweep or log sweep selection switch to select the sweep mood. Max. sweep width 1:100 and sweep speed 5 sec to 10 ms . Also FG-52 provide VCF input and synchronous Output Function. Convenient to operate.
4. To be as counter :

FG-52 is a 5 digits micro-control counter. FG-52 provide Auto range, Auto gate time and high resolution -0.001 Hz , High input impedance $-1 \mathrm{M} \Omega$, High band width $-0.2 \mathrm{~Hz} \sim 60 \mathrm{Mhz}$, High voltage resistance $-150 \mathrm{Vp}-\mathrm{p}$ features, Also, FG-32 provide Adjustable Trigger $+/-2.5 \mathrm{~V}$ with LED indicate.
Display unit Auto - indicate, HF / LF selector, 100Khz filter.
5. To be as Dry Battery :

FG-52 provide a DC Output function. The output voltage from +10 V to -10 continuous adjustable.
Can be used as a low power DC source. Dry Battery.

## III. FG-52 SPECIFICATIONS

1. General Specifications :

Generator -
Frequency : $0.05 \mathrm{~Hz} \sim 5 \mathrm{MHz}$ display by 5 digits LED, Max. resolution 0.001 Hz in 8 ranges.
Wave form output : Sine, Square, Triangle, Positive, Ramp, Negative Ramp, Positive Pulse and Negative Pulse, DC 8 wave forms.

Stability : $0.1 \% \sim 15$ minutes after switch "ON", $0.2 \% \sim 24 \mathrm{hrs}$ after switch "ON".
DC offset : +/- 10V(No. Load ), $+/-5 \mathrm{~V}(50 \Omega$ Load), continuous adjustable, controlled by a offset switch.

Counter -
Display : 5 digits $0.36^{\prime \prime}$ red LED. Max. Resolution -0.001 HZ .
Display unit : Hz / KHz Automatically controlled by CPU.
Common Specification -
Limits of operation : $0^{\circ} \mathrm{C} \sim 40^{\circ} \mathrm{C}, 10 \% \sim 80 \%$ R.H.
Storage environment : $-20^{\circ} \mathrm{C} \sim 70^{\circ} \mathrm{C}, 0 \% \sim 90 \%$ R.H.
Power consumption : 25 W .
Power source :
AC $115 \mathrm{~V}(+/-10 \%) 50 / 60 \mathrm{~Hz}$, FUSE : 600 mA
AC $230 \mathrm{~V}(+/-10 \%) 50 / 60 \mathrm{~Hz}$, FUSE : 300 mA
Ventilation: DC 12V / 100mA Fan.
Dimensions : $275 \times 90 \times 300 \mathrm{~mm}$
Weight : 2.5 Kgs Net.
Accessories : Power cord, operation manual.
2. Triangle wave :

Frequency : $0.05 \mathrm{~Hz} \sim 5 \mathrm{MHz}, 5$ digits LED display, Max. resolution 0.001 Hz
Symmetry : $50 \%$ (Rise wave) to $50 \%$ (Fall wave), $<1 \%, 1 \mathrm{~Hz} \sim 100 \mathrm{KHz}$
Linearity : $<1 \%$, ( $1 \mathrm{~Hz} \sim 100 \mathrm{KHz}$ ).
3. Sine Wave:

Frequency : $0.05 \mathrm{~Hz} \sim 5 \mathrm{MHz}, 5$ digits LED display, Max. resolution 0.001 Hz .
Distortion : $<1 \%, 1 \mathrm{~Hz} \sim 100 \mathrm{KHz}$.
Harmonic ratio : $<30 \mathrm{~dB}, 100 \mathrm{KHz} \sim 5 \mathrm{MHz}$
Frequency response : $<0.1 \mathrm{~dB}$, up to $100 \mathrm{KHz} .,<1.5 \mathrm{~dB}, 100 \mathrm{KHz}$ to 5 MHz .
4. Square wave :

Frequency: $0.05 \mathrm{~Hz} \sim 5 \mathrm{MHz}$, 5 digits LED display, Max. resolution 0.001 Hz .
Symmetry : $50 \%$ (Positive half) to $50 \%$ (Negative half). $<1 \%, 1 \mathrm{~Hz} \sim 100 \mathrm{KHz}$
Rise time : < 90ns (20Vp-p, No load).
5. Ramp wave :

Frequency : $0.05 \mathrm{~Hz} \sim 4.5 \mathrm{MHz}, 5$ digits LED display, Max. resolution 0.001 Hz , 8 range selected by rotary switch.
Symmetry : $90 \%$ (Rise wave) to $10 \%$ (Fall wave), continuous adjustable.
Linearity : $<1 \%,(0.1 \mathrm{~Hz} \sim 100 \mathrm{KHz})$.
6. Positive pulse :

Frequency : $0.05 \mathrm{~Hz} \sim 4.5 \mathrm{MHz}, 5$ digits LED display, Max. resolution 0.001 Hz .
Width : $0.4 \mathrm{sec} \sim 100 \mathrm{~ns}$, continuous adjustable.
Symmetry - $1: 1$ to $10: 1$ continuous adjustable. $1 \mathrm{~Hz} \sim 100 \mathrm{KHz}$.
Reverse : Pull the Rev, switch, the output will becomes Negative Pulse.
7. DC :

Output voltage : +10 V to -10 V continuous adjustable by OFFSET switch.
8. Main output:

Output impedance : $50 \Omega,<2 \%$
Max. Output : 20Vp-p (Non-load), +/- 1Vp-p., 10Vp-p (50 $\Omega$ load) +/- 0.5 V .
Min. Output: $0.1 \mathrm{Vp}-\mathrm{p}$ (Non-load), or $0.05 \mathrm{Vp}-\mathrm{p}(50 \Omega \mathrm{load})$
Attenuator: One -26dB (1/20) Attenuator, $<2 \%$ Accuracy

## 9. Synchronous Output:

Output impedance : $50 \Omega,<2 \%$, Accuracy.
Output level: TTL level, >3Vp-p fix amplitude.
Fan out: $>20$
Rise time : $<60 \mathrm{nS}$.
10. VCF input:

Input impedance : $0 \sim 10 \mathrm{~V}$
Input frequency: $\mathrm{DC} \sim 1 \mathrm{KHz}$
Input frequency variety $-1: 1$ to $1: 100$
11. Sweep synchronous output:

Output impedance: $1 \mathrm{~K} \Omega,<2 \%$
Output wave form : Linear or log sweep ramp wave.
Output amplitude : $10 \mathrm{Vp}-\mathrm{p}$ (Non load) or $5 \mathrm{Vp}-\mathrm{p}(1 \mathrm{~K} \Omega$ load)
Output frequency: $0.2 \mathrm{~Hz} \sim 100 \mathrm{~Hz}$ continuous adjustable.
12. Sweep generator:

Sweep form : Linear or log switchable.
Sweep speed : $5 \mathrm{sec} \sim 10 \mathrm{~ms}$, continuous adjustable.
Sweep width - 1:1~1:100

## 13. Counter :

Display : 5 digits, $0.36^{\prime \prime}$ RED LED display.
Max. Resolution : 0.001 Hz
Display unit: $\mathrm{Hz} / \mathrm{KHz}$ Auto range.
Time base : 20 MHz
Temperature coefficient : $<20 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$
Accuracy : $<0.02 \%+/-1$ digit.
Power supply : $+5 \mathrm{~V}, 160 \mathrm{~mA}$

Internal counter -
Range:
Auto range with 4 resolution,
$0.001 \mathrm{~Hz} / 0.01 \mathrm{~Hz} / 0.001 \mathrm{KHz} / 0.01 \mathrm{KHz}$, Auto control by CPU.
Display: $0.500 \mathrm{~Hz} \sim 5000.0 \mathrm{KHz}$ Auto select by CPU
Gate time : Variable, $0.25 \mathrm{sec} \sim 5 \mathrm{sec}$, Auto - setting.
Min. Display digits : 4 digits.

External counter -
Max. Input voltage : $<150 \mathrm{Vrms}$
Input impedance : $1 \mathrm{M} \Omega,<2 \%$
Input frequency: $0.2 \mathrm{~Hz} \sim 60 \mathrm{MHz}$
Coupling :
HF - For 100 KHz up frequency.
LF -- With 100 KHz filter, for the frequency lower than 100 KHz
Min. display digits : 4 digits.
Gate time : $0.25 \mathrm{sec} \sim 10 \mathrm{sec}$, Auto - setting depends on the input frequency
Sensitivity : > $30 \mathrm{mVrms}(1 \mathrm{MHz})$

## IV. FG-52 FRONT PANEL DESCRIPTION

1. POWER SWITCH - Push the switch "ON"will light the LEDof the digits (14) to indicate power "ON". 2. FREQUENCY - Turn the switch to set the desired frequency generated. This knob is for micro - adjust.
2. SYNCHRONOUS OUTPUT - The BNC synchronous output the TTL level square wave signal, the output frequency as MAIN output.
3. SWEEP OUTPUT - Sweep signal output BNC. It will operate individually whether the instrument was under sweep mode operation or not, Out put impedance $1 \mathrm{k} \Omega$, output amp. 10 Vp -p, output signal : Linear or Log.
4. MAIN OUTPUT - Function wave signal output BNC, Max. output impedance $50 \Omega$ Max. amplitude 20Vp-p (Non load).
5. AMPLITUDE - Turn the switch to adjust the output signal amplitude. Pull out the switch to attenuate the output 20 times (or -26 dB ).
6. DC OFFSET - The switch will set at OFF position in normal operation. When use for BIAS circuit, pull "ON" the switch and turn to adjust DC offset voltage.
7. SWEEP RATE - Turn the switch to adjust the sweep rate from 5 sec to 10 mS and the signal will output from (4). When pull the switch, the signal will synchronous output from (4) and (5).
8. SWEEP WIDTH - The switch will effected only under switch (8) was "ON". Turn the switch to adjust the sweep width. In normal position. It is "Linear sweep " and it will be under " Log sweep " when pull out the switch.
9. FUNCTION WAVE SELECTOR - Turn the switch to select the output wave forms. Sine, Triangle, Square, DC, 4wave forms.
10. FREQUENCY RANGE - Turn the switch to set the frequency of the output signal. The frequency display on (14) will beas the product of the indicated digits by (2) and (11). The frequency will be 10 times difference on each step.x1, x10, x100, x1000 4ranges.
11. Hz - the LED lit means the display units are "Hz".
12. KHz - the LED lit meas the display units are "Khz".
13. LED DIGITS - 5 digits to indicate frequency generated or EXT input. The units will be indicated by (12) or (13) selected by CPU automatically.
14. EXT-COUNTER - The red LED indicate Ext. counter condition. LED Light - Trigger level too high. LED Dark - Trigger level too low. LED flash - Triggering state.
15. DISPLAY - Indicate the source of the frequency display by (14).

INT Hz / KHz -- Display the frequency of the signal generated by the FG-52.
EXT HF - Display the external input high frequency signal, Set at this position to strain out DC signal and low frequency harmonic signal. Input only the expected high frequency signal.

EXT - LF 100 KHz Filter - Display the external input low frequency signal, Set at this position to strain out the signal higher than 100 KHz make the low frequency signal more stable.
17. RAMP / PULSE - Turn this switch to display RAMP wave from Tri wave and display PULSE from squ wave. When at pull Invert position, The display will be negative Ramp and negative Pulse.
18. EXT-INPUT - External signal input BNC. The input frequency 0.2 Hz to 60 MHz , Max. input voltage 150 Vrms (when (17) was at "PULL" position).
19. VCF-INPUT - External input DC signal to control the frequency generated. External input AC sweep signal to make it as External sweep. External input AC sine wave to make it as external FM modulation. Input signal $0 \sim 10 \mathrm{~V},<1 \mathrm{KHz}$. Input impedance $1 \mathrm{~K} \Omega$.

## V. FG-52 OPERATION INSTRUCTIONS

WARNING : Before applying power to your FG-52, make sure that the input voltage setting is correct for your power source.

CAUTION : All the knobs are set at " PUSH " position on operation if not special marked to be set at " PULL ".
(A). Function Generator and Inspection (Ref. to Fig.9-1)

1. Push the power switch on and make sure that the LED of the 5 digits are lit.
2. Connect OUTPUT BNC of FG-52 to the CH1 input BNC of your Oscilloscope, and the SYNC OUTPUT BNC to CH2, and set the trigger source of your oscilloscope at CH2.
3. Turn the FREQUENCY knob from $\mathrm{x} 0.05 \sim \mathrm{x} 5.0$ You will find the display of 5 digits LED and oscilloscope will be changed slightly on each step.
4. Turn the RANGE knob from $\mathrm{x} 1 \sim \mathrm{x} 1000$. You will find the display of 5 digits LED value will change 10 time on each step and the oscilloscope too. And then see (7) switch at Hz or KHz the display value will be changed to X 1 or x 1000 too.
5. Turn the FUNCTION knob to select the wave form output to CH 1 of your Oscilloscope. CH2 will be TTL square wave only.
6. Turn the AMPL knob to adjust the amplitude of the signal output to CH 1 , and when " PULL " out the switch, the amplitude will be reduced 20 times ( -20 dB ) but the display of CH2 (Sync output signal) will keep unchanged.
7. Turn the OFFSET knob. You will find both CH 1 and CH 2 will not changed.

This switch will operated only at " PULL " position. PULL out the offset switch and turn to set DC offset voltage (from +10 V to -10 V ) of the main output signal. But the sync output signal will not affected.
Note : When the offset voltage are higher then the wave (+ or -) the display wave form will be cut OFF.

1. Switch on the FG-52 and lit the 5 digits LED.
2. Connect the main OUTPUT BNC to the CH1 input BNC of you Oscilloscope.
3. Connect the SWEEP OUTPUT BNC to the CH2 input BNC of your Oscilloscope and set the trigger source of the oscilloscope at CH2.
4. Turn the SWEEP RATE knob, the CH2 of the oscilloscope will display a linear saw - tooth wave, the frequency will be variable from 5 sec to 10 mS by turn the switch. CH1 will display the wave according to the FUNCTION switch position. PULL out the switch to set "SWEEP ON". the display of CH 2 will keep unchanged, the display frequency will be variant by turn the knobs. But the display of CH 1 will be sweep wave, and the sweep speed will depend on the sweep rate.

NOTE: After "PULL SWEEP ON", the trigger source of the oscilloscope must be changed from CH 2 to CH 1 .
5. Turn the SWEEP WIDTH knob to adjust the sweep width by the display of CH 1 .

NOTE : Be sure that the SWEEP RATE SWITCH was at " PULL " position. When PULL out the sweep width switch, the sweep mode will changed from linear to $\log$ sweep. The wave form display of CH 1 will becomes $\log$ form.
6. AMPL and FUNCTION knobs will operate as Generator.
7. Frequency display on 5 digits LED as Generator, before "PULL SWEEP ON". this frequency will be the start frequency. After "PULL SWEEP ON", the sweep condition include frequency, wave form and sweep mode etc. will be observed from the CRT of the Oscilloscope. The display on LED will continuous variety.
8. VCF INPUT - Set the sweep rate switch at "PUSH" position to set FG-52 at normal generator mode. connect the sweep output BNC to VCF INPUT BNC and check the wave form display on the scope CH1. the wave form display would be the sweep wave. When input a sine wave from an other generator to VCF INPUT to observe the FM display. Be sure the frequency of the basic wave (FG-52) are higher than the external input signal.
(C). PULSE wave Generator (Ref. to Fig.9-3)

1. Push the power on and lit the 5 digits LED.
2. Connect the main output to CH 1 .
3. Connect the SYNC output to CH2 and set the trigger source of the Oscilloscope on CH2.
4. Set the FUNCTION knob on Squwave position, and turn knob till the display become pulse wave form you want.
5. Set the FREQUENCY and RANGE to the desired frequency display on LED.
6. Pulse width : the pulse width can be adjustable by knob.
7. Pull knob to display negative pulse position and test the negative pulse as positive pulse.
8. Turn the AMPL to adjust the amplitude of the signal output from the main output BNC.

The signal will be -26 dB when " PULL " out the switch. But the signal output from " SYNC " output BNC will not affect by this switch. The output signal of " SYNC " output will keep on TTL level.
9. Set the DC offset voltage by pull out the " OFFSET " switch and turn to adjust the DC offset voltage from +10 V to -10 V .
(D) Frequency counter (Ref. to Fig. 9-4)

1. Switch on the power switch, lit the LED digits.
2. DISPLAY: The coupling provide 4 steps.
(a). INT/Hz : to be used as internal counter from $0.05 \mathrm{~Hz} \sim 5000 \mathrm{~Hz}$.
(b). INT/KHz : to be used as internal counter from 0.5 KHz to 5 MHz .
(c). EXT HF: To use as External Counter for high frequency ( 100 KHz to 60 MHz ).
(d). EXT LF : To use a External counter for low frequency $(0.2 \mathrm{~Hz} \sim 100 \mathrm{KHz})$.
3. Connect the EXT INPUT BNC to the external signal source, lit the LED
4. Display unit: The display unite of the FG-52 will be on Hz or KHz automatically controlled by CPU .
