

Reporter 21D MicroSun More Light for Less Current

MICROSUN – THE COOL LIGHTS

The Reporter 21D MicroSun daylight reporter lamp can run on 24-V car or boat batteries, as well as Sachtler's conventional 12 and 30-volt rechargeable batteries. Even the powerful 30-V rechargeable batteries work with the MicroSun. This produces long operating times previously unknown in EB operation.

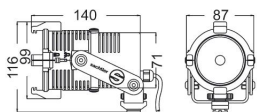

The MicroSun's operating temperature is so low that filter foils may be used on a long-term basis direct in the filter holder. Only a small piece of daylight conversion foil (CTO) is needed to change from daylight to artificial light. The sturdy plastic casing keeps heat conductivity down. Even after long periods of operation, the lamp can be touched with bare hands.

The wide focussing area of 18 bis 61° HW makes the Reporter 21D a flexible choice for many applications. The holder for filters and the four wings are also suitable for other accessories with 76 mm diameter (corresponds to 3"). For example for the projection of gobos or to take a chimera holder.

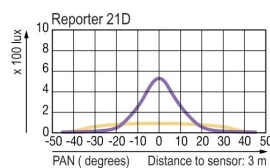

The MicroSun's light duration with a fully-charged battery is twice as long as a conventional 50-W halogen lamp with the same battery power. When connected to the NP1 14.4 V/1.9 Ah camera battery, operating time is one hour and with the smallest 12 V / 4.5 Ah Belt-Pack® more than two hours.

Technical Facts

Power	21 W
Bulb socket	special
Bulb Type	Sachtler L21D
Weight	578 g / 1.27 lbs (Incl. bulb, barndoor, cable and PowerTap plug)
Weight 4-leaf barndoor	100 g / 0.2 lbs
Focusing ratio	1:5.9
Cable length	0, 7 m / 2.3 ft
Connector Type	A/B PowerTap
Mount Type	1/4" - threaded screw incl.shoe for camera mount
Voltage	9 - 36 V DC
Dimensions (L X W x H)	140 x 87 x 116 mm / 5.5 x 3.4 x 4.6 in

Dimensions

Reporter 21D
 x 100 lux
 PAN (degrees) Distance to sensor: 3 m
 Spot peak: 530 lux
 Half value: 265 lux @ 19°
 Flood peak: 90 lux
 Half value: 45 lux @ 65.5°
